

— E — as evaluated (K1_locomotion, head/arms merged) — T — training robot model (K1_22dof) — command

Base-frame forward speed of the Trunk origin and yaw rate; Isaac Sim 4.1, flat plane, model_14498, repeat 1 (repeat 2: see repeatability table). Gray = command.

Top row: thin = every 0.02-s control step, bold = 0.66-s (one gait cycle) centred moving average, shaded = steady-state window (last 8 s). Sequence rows: every 0.02-s step, unsmoothed.

Forward (0.5, 0, 0): forward speed

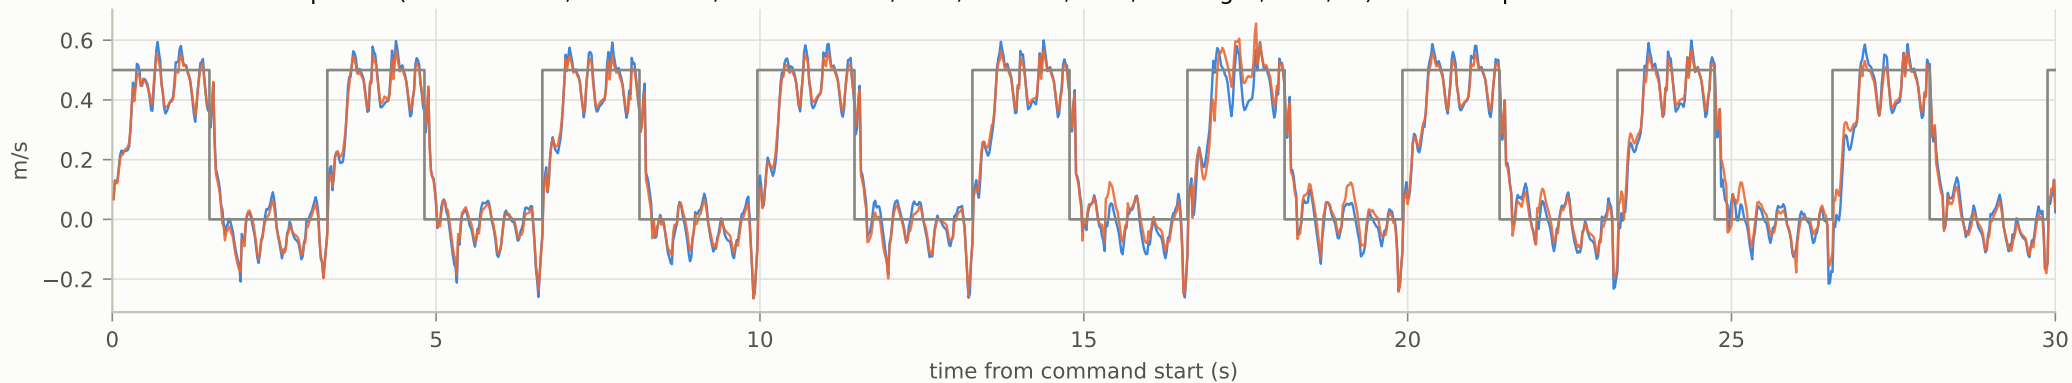

Turn left (0, 0, $+\pi/6$): yaw rate

Turn right (0, 0, $-\pi/6$): yaw rate

Executor-like sequence (forward 1.5 s, zero 0.16 s, turn left 1.5 s, zero, forward, zero, turn right, zero, ...): forward speed

Executor-like sequence: yaw rate
